

*SimplexGrinnell 4100 Series
Fire Alarm System Operator Training*

**AFFORDABLE INSTRUCTION HAS
NEVER BEEN EASIER**

Computer based training tailored to the fire alarm system in your facility.

Are you complying with national and provincial codes and regulations with respect to the training of fire alarm system operators? Does your staff know how to silence the fire alarm signal appropriately under a variety of emergency conditions?

Our computer based training programs can help you:

- Comply with the fire alarm system operator training requirements of national and provincial regulations and avoid increasingly heavy penalties for non-compliance with codes and standards.
- Effectively and efficiently operate the fire alarm system installed at your facility.
- Reduce productivity losses caused by unnecessary evacuations and confusion due to poor control of the fire alarm system.
- Learn critical system functions by using the component simulations included in the program.
- Eliminate the risk of false alarms possible during the traditional training process.

This module will provide the operator with the knowledge, understanding and confidence necessary to take effective control of the system when called upon. Programs are customized to the client's needs and may include:

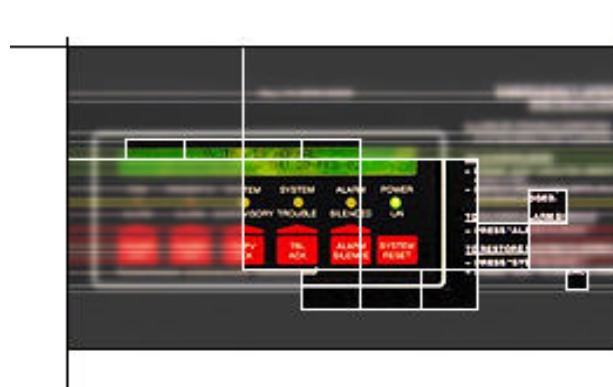

- An overview of system components, including initiating devices, signaling devices, and control panels.
- Alarm signal recognition and response training through audio-visual samples of actual signals.
- Critical operating procedures: acknowledge, signal silence and reset.
- Effective use of voice communication systems and other emergency communication devices.

SimplexGrinnell 4100 Series Fire Alarm System Operator Training

REVIEW THE MATERIAL AS OFTEN AS REQUIRED

Product Features

- High quality multimedia simulations of equipment interfaces and processes.
- Accurate, consistent and meaningful material.
- Modular design for scalability and long-term product value.
- Easy employee access via personal computers.
- User-friendly interface and navigation tools, including intuitive menu structures, page forward and back controls, pause and print screen features.

License Terms

This product is licensed for single users on single machines. Additional licenses are required for each additional user and or machine..

The program becomes active after an unlocking code is issued. Each individual computer requires its own unlocking code.

Unlocking codes may be transferred from one machine to another without supplier interaction.
